Product Introduction 产品介绍

Astron PAR30 LED lamp is definitely the most economical replacement for your 75w PAR Halogen bulbs. Using high quality SHARP LED chipset and driver directly from Japan, our bulb assures a longer life span, consistent colour tone and low light decay for the LED bulb. The LED bulbs' exterior is made with high grade aluminium to maximize durability and safety for users. For a similar brightness as a 75w PAR Halogen bulb, one can conveniently chose our Astron PAR30 20w LED lamp. This helps to save almost 75% in electrical consumption in the same lighting function. With 8 to 12 operating hours, we can assume a break-even time period of 6 – 12 months. All in, it delivers great cost savings to any users. This has been widely adopted in hotels, display lightings for malls, retail shops and also in residential homes.

Features 产品特点

- High quality LED PAR 30 lamp with aesthetically crafted aluminium exterior;
- Consistent colour tone, low light decay rate and easy to install;
- The useful life can be 20,000 hours; Lifespan is 12 times longer than Halogen bulbs;
- COB Design with precision engineered reflector ensures optimal light throw;
- Strong heat dissipation with thick and well spaced high grade aluminium louvre design.
