Product Introduction 产品介绍

Dunamis LED T8 tube is a high quality LED tube comprising 2 rows of LEDs. This creates a smooth lighting effect which ensures sufficient lux level required for any offices, walkways and homes. The LED tube replaces conventional CFLs tubes and is installed widely in both commercial and residential projects as the main lighting. A 18w, 4 feet Dunamis™ LED tube replaces 36-45w fluorescent tube easily to achieve a similar brightness. This results in an electrical cost savings of 50%. Also, we can assume a break-even of 6 to 11 months for 8 to 12 hours of operations per day. With high quality Taiwan LED chipset and driver, the LED tube provides a strong assurance to users. All in, it will result in great cost savings for users.

Features 产品特点

- Professional Optical Design, High Brightness, smooth and comfortable light effect;
- High CRI, which is close to natural light;
- 2 rows of LEDs for maximum brightness to the environment;
- The useful life can be 25,000 hours; Lifespan is 12 times longer than CFL;
- Strong heat dissipation achieved with advanced and high quality aluminium heat sink design.
